|  | (Sub-)species, form, subpopulation | Ear length [mm] | Ear height [mm] | Ear breadth [mm] | Other ear characters except from colour and hair cover |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Asian lorises |  |  |  |  |  |
| L I | Slender lorises, genus <br> Loris <br> To avoid confusion, the old taxonomic names (above) are listed here in addition to the new names based on Groves 2001 because taxonomic research may lead to further changes. |  |  |  |  |
| L II a | Old name: L. t. tardigradus <br> Groves 1998, 2001: change into distinct species <br> L. tardigradus ${ }^{64,}{ }^{65}$, <br> ${ }^{233}$ ). Including several phenotypically distinctlooking forms: see for instance ${ }^{227}$, L II b, L II c and loris identification key in this database. | Males (lowland origin): from Henaratgoda: 21 mm ; 19 mm ; from Colombo: 22 mm ; 22 $\mathrm{mm} ; 23 \mathrm{~mm}$; from Matugama: 22 mm . Male from Kitulgala ( 900 ft ): 23 mm . Females (lowland origin): from Henaratgoda: 20 mm ; possibly from Henaratgoda: 21 mm ; from Colombo: 23 mm . Average: males $\left(\mathrm{n}=7\right.$ ): 21.7 mm ; females $(\mathrm{n}=3)$ : $21.3 \mathrm{~mm}{ }^{14}$. Mean (both sexes): 20.38 mm ; females: mean: $19.75 \mathrm{~mm}(\mathrm{n}=4)$; males: mean: 21 mm $(\mathrm{n}=9)^{23}$. <br> Males ( $\mathrm{n}=7$ ): average 21.7 mm , maximum 23 mm . Females ( $\mathrm{n}=3$ ), average: 21.7 mm , maximum 21 mm (? Less than average!) ${ }^{18}$. <br> ( $32 \mathrm{~mm}{ }^{22}$ : probably not tardigradus *) |  |  |  |
| L II b | Small form with the appearance of a shorter muzzle ${ }^{15}$. |  |  |  |  |
| L II c | Small form with longerlooking muzzle / heartshaped (L. t. grandislike) face ${ }^{15}$. |  | Male TA1: $24 \mathrm{~mm}(\mathrm{n}=1)$; female TA5: $23 \mathrm{~mm}(\mathrm{n}=1)^{15}$. | Male TA1: $15 \mathrm{~mm}(\mathrm{n}=1)$; female TA5: 13-14 mm $(\mathrm{n}=1)^{15}$. |  |
| L II d | (L. gracilis zeylanicus: synonym? ) ${ }^{2}, 14$. |  |  |  |  |
| L III | Loris lydekkerianus 233. <br> Groves 1998, 2001: species including all formerly known Loris subspecies except from the former $L$. $t$. tardigradus ${ }^{64},{ }^{65}, 233$. |  |  |  |  |
| L IV | Old name: Loris tardigradus malabaricus <br> (Wroughton, 1917) ${ }^{1}$ <br> Groves 1998, 2001: L. <br> lydekkerianus <br> malabaricus ${ }^{64}$, ${ }^{65}, 233$. | Ears smaller than in the other races ${ }^{14}$. <br> $25 \mathrm{~mm}{ }^{22}$. Specimen from Coorg, possibly not yet quite adult: $25 \mathrm{~mm}(\mathrm{n}=1)^{21}$. <br> Female from Kutta (Wroughton's type): 25 mm ; female from Virajpat (Shortridge): <br> 24.5 mm ; male from Virajpat (Shortridge): 220 mm ; average $(\mathrm{n}=2): 24.75 \mathrm{~mm}^{14}$. |  |  |  |

* According to Osman Hill, Wroughton's specimens described as L. t. tardigradus is from Mayor's Bombay collection and probably L. t. nordicus, a form still undescribed when Wroughton published his data ${ }^{23}$.
